

**ADJUSTABLE FOOT SUPPORT****Abstract of the Disclosure**

A method and apparatus is provided that pertains to an adjustable foot support of a motorized vehicle. An insert is placed in a bore of the foot support mounting member or the mounting bracket mounting member to enable coupling of a foot support to a mounting bracket attached to the motorized vehicle. The insert can be inserted from either an upper side or a lower side of the mounting member, which will adjust the lateral position of the foot support relative to the mounting bracket, thereby ergonomically accommodating different riders' needs and preferences.
